

deepL Integration

The deepL integration is done by an extension developed by avenit AG. It provides the function to translate texts automatically into a target language. This works by default for all text fields from content elements. The function can be extended to text fields from custom records.

Function

For easier translations of content elements, the avenit extension av_deepL was included. With a deepL API Key all texts from content elements are translate automatically if the element is translated. This all appears in hidden if the content elements for a new language is created. It does not matter if `translate` or `copy` is chosen.

It is possible to enable or disable the deepL feature per page. If the feature is enabled the deepL icon is green. If it is disabled the icon is grey

Where automated translation is possible

Content Elements

- Banner
- Banner Career
- HeroSlider
- Header
- Textmedia
- Text Media Mobile
- Teaser Single
- Quote
- Contract Info
- Red Square
- Flip Card

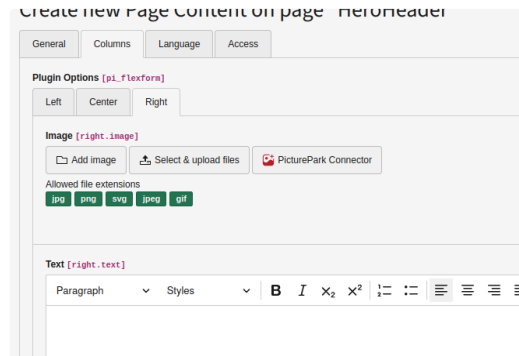

Records

- NewsArticle
- NewsArticle Group
- Hotspots
- Compare Table
-

Exclusions

Some content elements have additional options placed in a flexible form, which differs in every content element (called flexform or plugin options). It's not possible to translate these values automatically. Here is a list of content elements with optional texts in a flexform:

- Banner 3Col
- CTA
- KeyFigures
- Forms

The screenshot shows a web form titled "Create new Page Content on page: heroheader". The form has tabs for "General", "Columns", "Language", and "Access". The "Columns" tab is active, showing "Plugin Options [pi_flexform]". Below this are tabs for "Left", "Center", and "Right", with "Right" selected. The "Image [right.image]" section includes buttons for "Add image", "Select & upload files", and "PicturePark Connector", along with a list of allowed file extensions: jpg, png, svg, jpeg, gif. The "Text [right.text]" section features a "Paragraph" dropdown, a "Styles" dropdown, and a rich text editor toolbar with icons for bold, italic, strikethrough, subscript, superscript, bulleted list, numbered list, and indent.

FlexForm von Banner 3 Col

Configuration (admin only)

Step 1

Set the API Key as environment variable. A deepL API package is needed.

Step 2

Enable the feature in the extension settings section.
